DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 15-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Kishi et al (U.S. Patent No 5,987,635).

With respect to claim 15, figure 4 of Kishi et al discloses a memory device comprising a control circuit (15) for generating controls signals (36, 37, 38) for operating the semiconductor chip (22) and a test control circuit (16, 17, 18) being operative in a test mode (when signal at 32 is applied at 18) for inhibiting output of the control signals. See column 8, lines 1-20.

With respect to claim, the terminal TM would be considered as a test starting terminal because this terminal receives a test starting signal.

Allowable Subject Matter

Claims 1-14 are allowed.

Claims 17-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: ***

The prior art of record fail to teach or suggest a memory device comprising a first chip and a second chip. The first chip having a control circuit for generating control signals for operating the second chip and a test control circuit for inhibiting the control signals from being transmitted to the second chip while the first chip is tested (claims 1 and 11); a circuit for setting the output node of control signals in a high impedance state (claim 17), and a level fixing circuit as claimed in claims 18 and 19.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Makabe et al disclose a memory device having a test circuit.
- Haraguchi et al disclose a memory device including a test circuit
